* NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ò
                             //note="Vector: possession of the property of the property of the mana was isolated from entire roots of 2-month-old "Williams" plants that were greenhouse grown in 5-gallon pote: To suppress nodulation, Black Gold all-Purpose potting soil was supplemented with: 0.36g/L available phosphoric acid (P205), 20mg/L urea N. 0.16g/L S, 0.49mg/L B, 2.5mg/L Cu, 0.15g/L Fe, 13.5mg/L Wn, 0.26mg/L Mo, 14mg/L Zn, 20mg/L Ca, and the following nutrients in a slow-release form (osmocote): 0.16g/L ammonia N, 0.185g/L nitrate N, 0.35g/L available phosphoric acid, and 0.35g/L soluble potash. No nodules were visible on the roots at harvest. Stratagene's cDNA Synthesis Rit (catalog #200401) was used to synthesize the CDNA. First-strand synthesis was performed with 5-methyl dCTP, hence the ligated cDNA is hemimethylated.

Stratagene's first-strand synthesis was used (GAGAGAGAGAGACACACACCACCAG(T)-18]. After second-strand synthesis is, the CDNA ends were 'polished' with clone Pfu DNA polymerase, ligated to EcoRI adapters, and phosphorylated. The XhoI site within the first-strand synthesis primer was restricted by digestion with XhoI; all XhoI sites in the CDNA constructs were strategioned at the CDNA constructs were stated into Stratagene's pluescript II XH end per digested with EcoRI and XhoI, and phosphorylated). Both the white and ligated into Stratagene's pluescript II XH++) that had been digested with EcoRI and XhoI, and phosphorylated). Both the white and blue colonies appear to contain recombinant plasmids with CDNA inserts. This library as constructed by Dr. Paul Kelm and Dr. VIrginia Coryell." 5 others

Anote—Vector: pBluescript pSK: Site_l: EcoRI; Site_2:
Xhoi; M. truncatula sterilised seeds were germinated for
72h at 25 C. before transplanting into a 1/3 Epoisses soil
27/3 calcined Terragreen mix in the presence of onion
root fragments colonized by the arbuscular mycorrhizal
fungus Glomus intraradices (Schenck & Smith, isolate LPAB). The plants were watered every day and twice a week with
a modified nutrient Long Ashton solution without phosphate
but with a high level of nitrate. After 3 weeks RNA was
extracted from whole root systems. CDNA was prepared from
polyA+ enriched RNA. The CDNA was directionally ligated
into Uni-zap XR vector from Stratagene and packaged using
Glapack Gold packaging extracts. Plasmids containing cDNA
inserts were mass-excised from phage stocks using Exassit
helper phage and propagated in SOLR cells. Clone ordering
sequencing was performed by the Centre National de
finnaal origin."

//dab.host="Re. coli strain SOLR"
//note="Vector: pBluescript SK -; Site_1: EcoRI; Site_2:
Xnoi; cDNA was prepared from poly4+ enriched RNA. The
CDNA was directionally ligated into the Unizap XR vector
from Stratagene and packaged using Gigapack III Gold
packaging extracts. Plasmids containing cDNA inserts
were excised from the recombinant lambda-Zap phage using
Ex-assist helper phage and propagated in SOLR cells."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /note="Vector: pBluescript SK -; Site_1: EcoRI; Site_2:
Xhoi; cDNA was prepared from polyA+ enriched RNA. The
cDNA was directionally ligated into the Unizap XR vector
from Stratagene and packaged using Giapack III Gold
packaging extracts. Plasmids containing cDNA inserts
were excised from the recombinant lambda-Zap phage using
Ex-assist helper phage and propagated in SOLR cells."
